This profile was constructed using three weeks of circulation and computer logon/logoff transaction data collected in February and March 2011. Statistics include transactions for the same borrower or computer user were eliminated from the data set to focus on the home address of the branch user and does not reflect the intensity of the borrower or computer users' use of the library.

Note: All borrowers of books and other media are required to provide a street address; however, only about 50% of computer users identify themselves when registering for a computer session.
